

Registering CAC PKI Certificates

Double click the **ActivCard icon** (looks like a smart card reader) displayed in the Windows SysTray (this icon will be placed in the tray after the ActivCard Gold installation process is completed) or run the **ActivCard Gold Utilities** from the Windows Start/Programs menu.

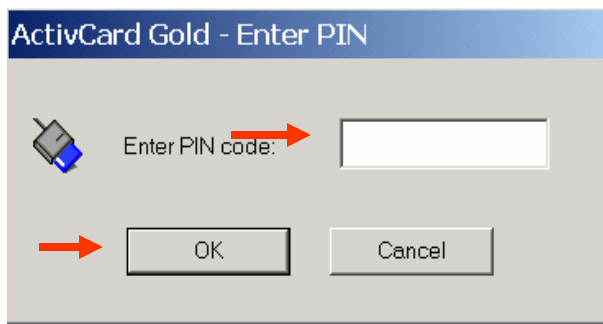

After launching the **ActivCard Gold Utilities**, insert your CAC into the card reader. The **OK** button will become highlighted once the CAC is recognized by the card reader.

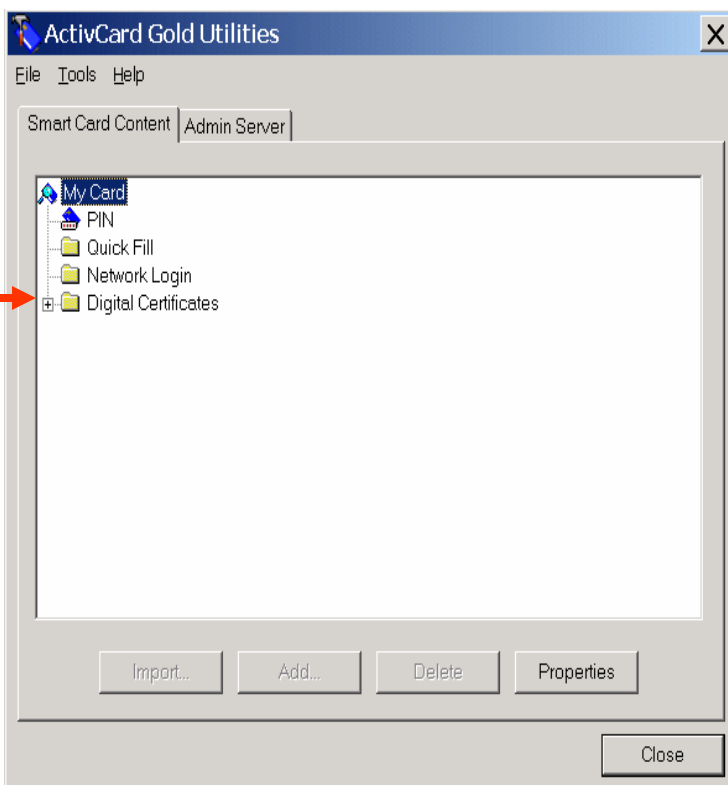

1

Click **OK** to continue.

2

You will be prompted to enter your PIN. This PIN was chosen when the CAC was issued. Enter your **PIN** and click **OK**.

3

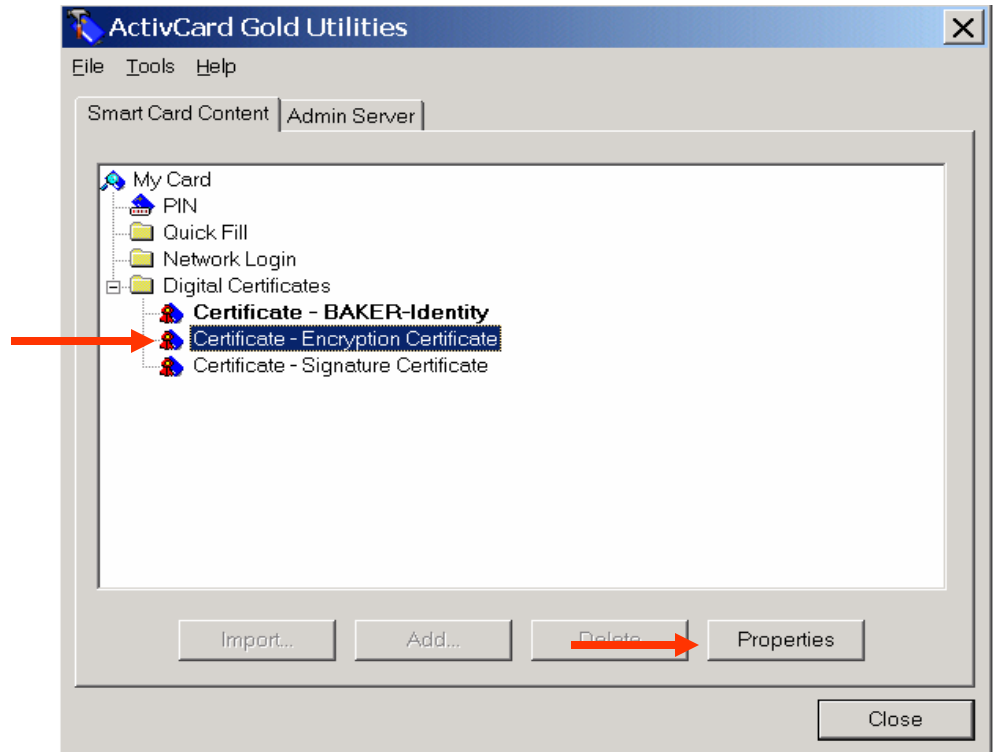

The **ActivCard Gold Utilities** window will appear.

Click the + sign next to **Digital Certificates** to expand the **Digital Certificates** folder.

NOTE: PM SET-D does not support the use of Network Login.

4

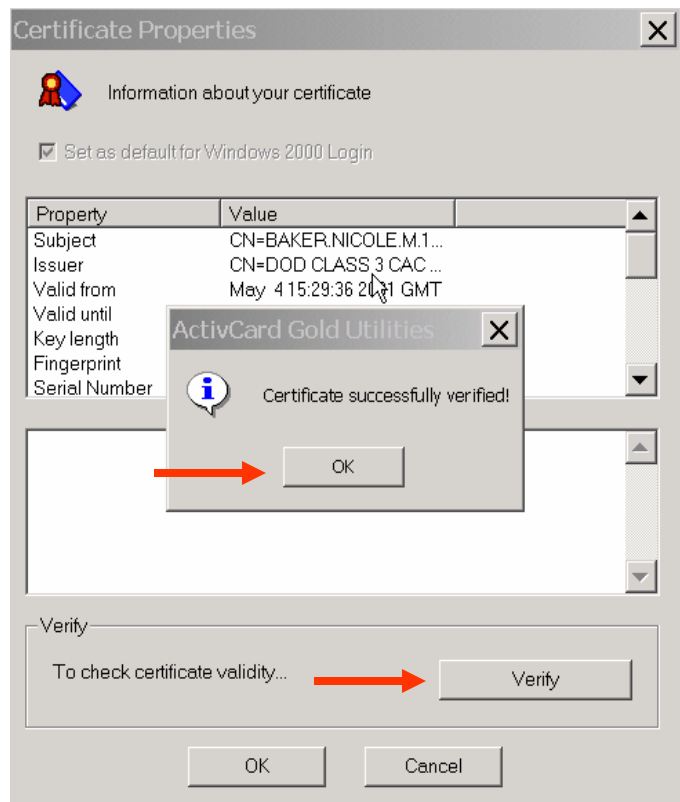

Three certificates will be shown in the Digital Certificates folder. Highlight a certificate and click **Properties** to verify details of the certificate.

5

Click **Verify** to verify the Certificate. If the Root Certificates are installed correctly on the PC, the user certificates will be successfully verified. Once the Certificate is successfully verified, click **OK** then click **OK** to close the **Certificate Properties** window.

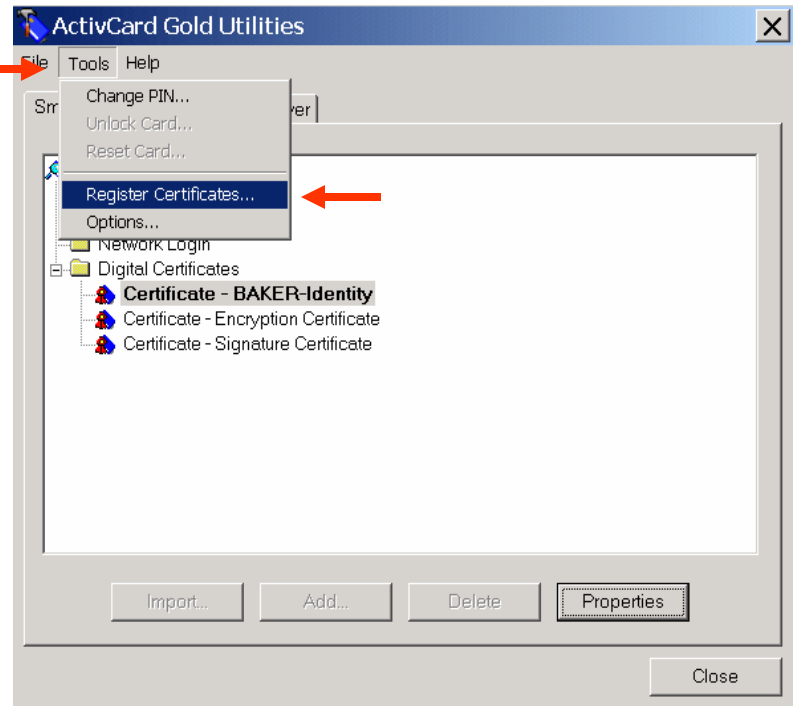

You may repeat these steps for each certificate.

ActivCard Gold 2.2 will not have the certificate verification feature.

6

To register certificates, highlight the Digital Certificates folder or any certificate in the folder. Click **Tools** on the menu bar then click **Register Certificates**.

NOTE: All 3 certificates will be registered in this one step.

ActivCard Gold Utilities

This operation will allow you to use from this machine the certificates already stored in the card. This will not export your private key from the card to the PC but just public information including the digital certificates.

This operation needs to be done in the following cases:

- You download a certificate from another machine.
- You downloaded the certificate in another application than the one you plan to use (download in Netscape browser and use in Microsoft Internet Explorer for example).

Even if the operation is not needed this operation will insure access to all the certificates downloaded in the card.
Do you wish to proceed?

Yes

No

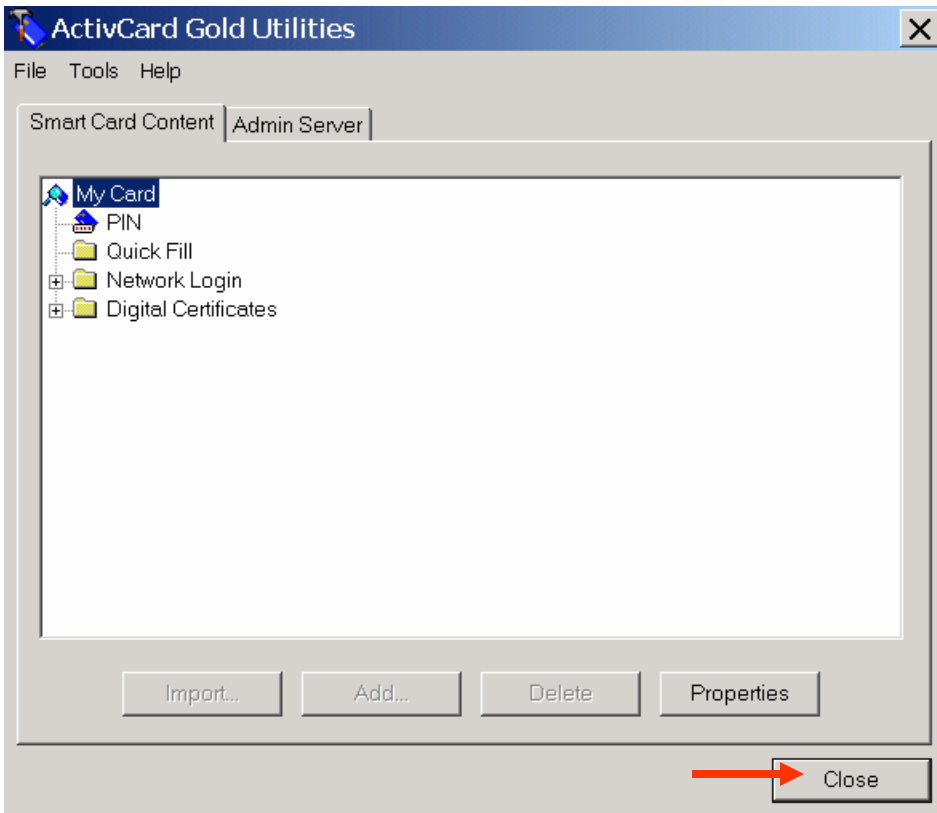

7

Click **Yes** to proceed.

8

Click **OK** to complete Certificate installation.

9

Your certificates are now successfully registered. Click **Close** to close the **ActivCard Gold Utilities** window.
